Dear Philip

I have now finally had a chance to look at your plants collected in Lindi District 1995. As you can see quite a number of interesting species. It certainly re-inforces my conviction that the coastal forests of Lindi District (and probably N Mozambique) are much richer than those further north. I particularly want to draw your attention to numbers 11, 14, 16, 29, 34, 35, 37, 39, 47, 51, 55 (probably the most exciting of the lot), 59, 68, 71, 74. Many of the others are more or less endemic in T8 and only known from relatively few collections. Especially Chitoo Forest seems full of exciting stuff. I must get myself down there again some time !.

Hope to hear from you soon.

Yours sincerely

Kaj Vollesen
